Supracondylar Fracture and median nerve injury,Osgood- ,
Schlatter Disease, myositis ossificans

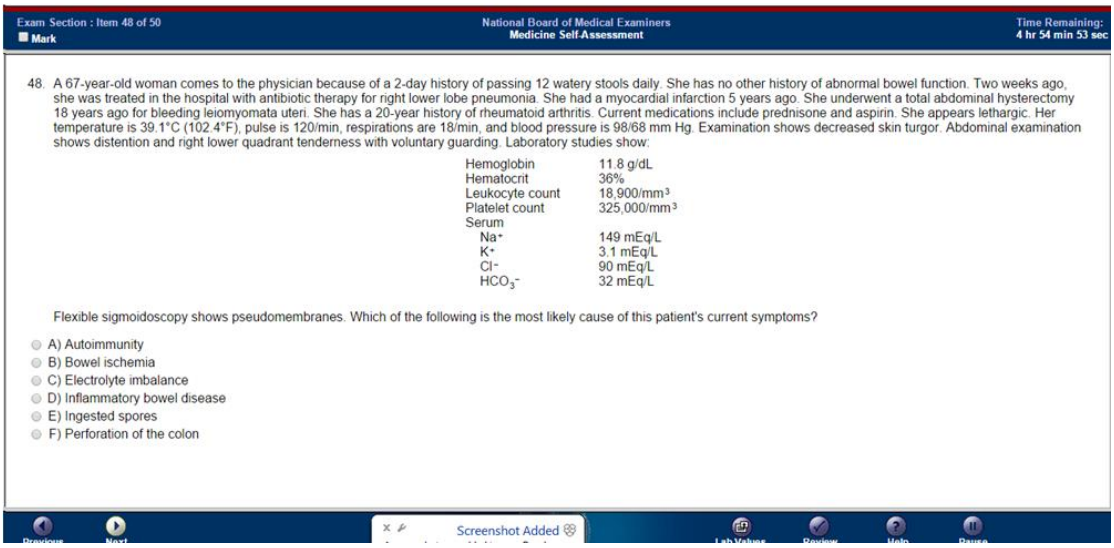

6th year NBME surgery

Main concepts

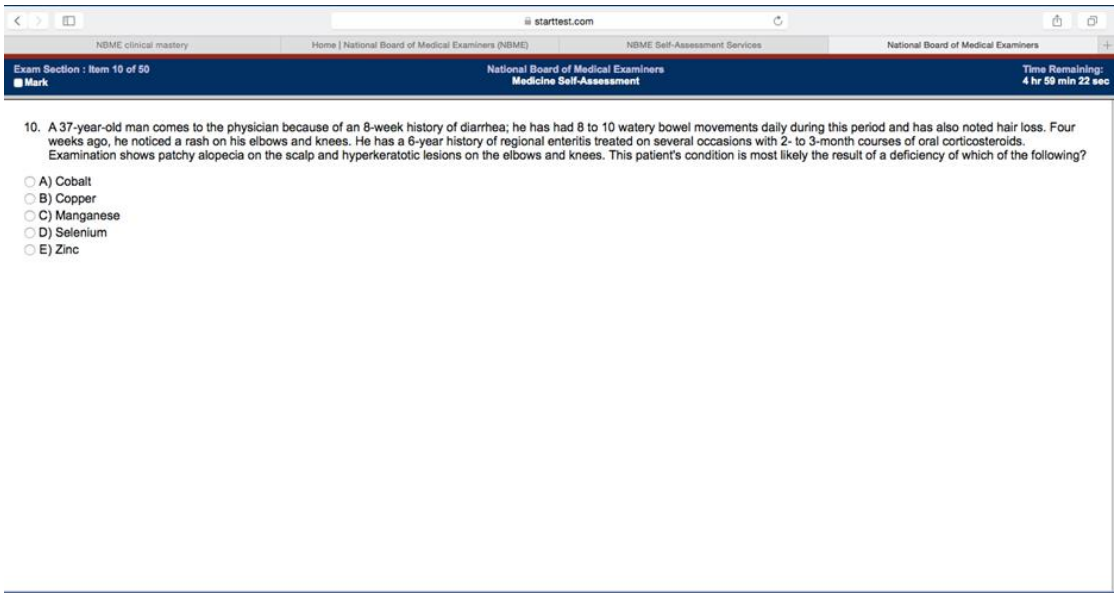

1- Trauma patient , nose bleeds , laceration on face , airway comprrmise , next step : Orotracheal intubation
2- Chest tauma with x-ray , widened mediastium , most common cause : Aortic transaction
3- Trauma patient with descrreption of flail chest : answer is flail chest
4- Child with head trauma , then lucid interval : most coomn epidural hematoma
5- Ethical case about a patient unresponsive , on mechanical ventilation , wife asked for removal , what is your action ?
6- Patient with a description of **hereditary spherocytosis**s , with direct jaundice , what is the mechanism ?
7- Patient with femoral neck feacture , admitted for preoperative assessment , and received 2 units blood , 1 hour later , he developed dyspnea , bilateral rhonchi and wheezes , what is the most common mechanism ?
8- 27 yrs Female patient with dyspnea at night , and picture of pulmonary stenosis (left sterna ejection systolic , split S2 ..) most common diagnosis ?
9- Post renal transplant patient , 1 month later , high creatinine , what is the most common mechanism of rejection ?
10- Post renal and pancreas transplant , pt develop nausea , picture of CT , most common mechanism ?
11- Trauma patient , ecchymosis In the pelvis area , high riding prostate , minimal blood at the urethrl meatus , most common cause ?
12- Patient received 10 units blood , then develop eccymosis , most coomn cause ? DilutionalThrombocytopenia !!
13- Ulcerative colitis 12 yrs ago , comes , last vist was two years ago , what screening test should you do ?
14- Patient with diverticulosis , develop left sided pain , in addition to bowel rest , what should you do ?
15- 18 yrs old , positive APC , 2 polyps found , what shoul you do ?
16- Severe testicular pain , not relieved by elevating testes , next step ?
17- 9 mo , cries , leg to knee position , bloody stools , next step ?
18- Patient with righ upper quadrant pain after eating , ultrasound , gallstones , without thickening , most likely diagnosis ?
19- Chronic hepatitis C , elevated alpha feto protein , next step ?
20- Colon cancer resected on screening liver lesion found , next step ?ithink resection because its one lobe and I think the liver enzymes were quite normal in the question
21- Post gastrectomuy ,serosanginuous fluid from wound , albumin 1.5 , most coomon ?
22- 60% burn ,mostcommon cause of hypovolemia ?
23- Carpal tunnel case , in addition to ibuprofen , whatr should do ?
24- Female , running , then foot pain , increase with flexion ?stress fracture

25- Worker with calcaneous x ray , pain increase on standing ?plantar fascitis there was a spur on the xray
26- Progressive dysphagia m episodic regurg , barium swaalow picture ?
27- Epigastrictenderness ,diabeteic elderly female , next step ?
ECG!
28- Case of pulmonary congestion , cardiomegaly , hyponatremia , hypokalemia , next step ?
29- Case of HTN , hypokalemia , CT abdomen , what will foumd ?
30- Case of hypercalcemia , next step in management ?
31- Case of hyperkalemia . most common cause of this (I forget)
32- Post Aortic aneurysm reapir ,hypoosmalar urine , most common cause ?
33- Post aortic aneurysm reapir ,aortenetric fistula developed , whatr to do ?
34- Case with urine hyperosomalr , (I forget the case)
35- Chron's high output fistula to the skin , next step ?
36- Throidmass , solid , next step ?
37- Twisted knees ,synocial fluid leukocyte 80000 , negative gram stain , most common cause ?
38- Radius fracture in elderly female . most common risk factor ?kanfe aging o kanfe loss of estrogen effect on osteoclast
39- Case with cardiac ef 35% (I forgot it)
40- Casutiicingestion ., next step ?endoscopy
41- Zankerdiverticulum , most commonly associated with ?
42- Mass in the upper esophagus , next step ?
43- Direct hernia case
44- Femoral hernia cse
45- Patient with mediastinal , aortic and axillar lymph modes , wht to do ?
46- Melanoma , 1.4 depth , what to do ?
47- Ulcer on nose , most commonly ?
48- Case with charcot triad ,
49- Incomepetnt veins with rflux to popliteal vein ?>
50- Insulinoma , next step ?
51- Post URT thyroid pain ?
Subacute thyroiditis
52- BMI very high (I think in sixties) , in addition to exercise , what do you recommend ?
53- Sudden onset curtain vision loss –
Retinal Detachment
54- Eledelry with bowel obstruction and vomiting : sigmoid volvulus
55- Pharmacologic tx for hiatus hernia with mid esogaus ulcers
56- Barrets and carcinoma in situs , next step ?
57- Case of gradual vision loss , left fundoscoyinvisibke , SLE patient on predinsolone ?
cataract
58- Patient on ventilator , rate 10/min , ABGs given , PCo2 60 , next step ?
Increase rate
59- Clinical picture of ARDS , what is the mechanism ?
60- Typical clinical case of Zinc deficiency

61- Newborn , I think a case of TGA , symptoms at third day , what do you think the immediate cause of symtoms ?
Closure of PDA
62- Newborn case TOF
63- In a diabetic , small tags on axilla , and skin changes removed multiple times , where is the pathology which layer of skin ? skin appendages !
64- Clubbing , bilateral wheezes , nasal polyps . most common mechanism ?
65- Infiltration ductal carcinoma on biopsy , next step ?
66- Unilateral breast skin peeling
67- Unilateral bloody nipple discharge , free mammogram
68- Case of limb ischemia , low ABI , absent femoral and popliteal pule , next step ?
69- Pleural effusion , high protein and LDH , mesothelial thickening , negative culture , next step ? options were thoracscopy mediastioscopy bronchoscopy or no further evaluation
70- Case appendectomy typical
71- gallstone pancreatitis treated , next step ?
72- newborn , vomiting immediately post feeding , next step ?
NG tube
73- cervical spine fracture , atient develop hypotension , mechanism ?there was loss of sensation below nipples I think
unopposed parasympathetic ?
74- condyloma acuminate , best next step ?
75- distantmets Breast Ca , with pleural effusion , patient needs symptomatic treatment , next step ?
76- case of Gilbert syndrome , what is the defective enzyme ?
77- myelomenigocele , what will be assocaied with ?
neurogenic bladder ?
78- hypovolemic shock parameters
79- question I think describing a patient with lympjoma with multiple palpable lymph nodes in mediastinum and paraaortc but the biggest in dimension being the paraaortic the question wanted to know which node to biopsy or sth like that
80- Case of anal mass , huge one , next step ?
81- في سؤال عن الحروق بأي حال ممكن نزيد السوائل الي نعيطيه
اعتقد الجوابprerenal azotemia
82- Elderly , constipated , takes codienes , what next step ?
Colonscope
83- Case od Decompensated heart failure with pulmonary edema , next step ?
Give O2
84- Lung cancer with pleural effusion ?
I think do thoracentesis
85- This

86- Answer is E

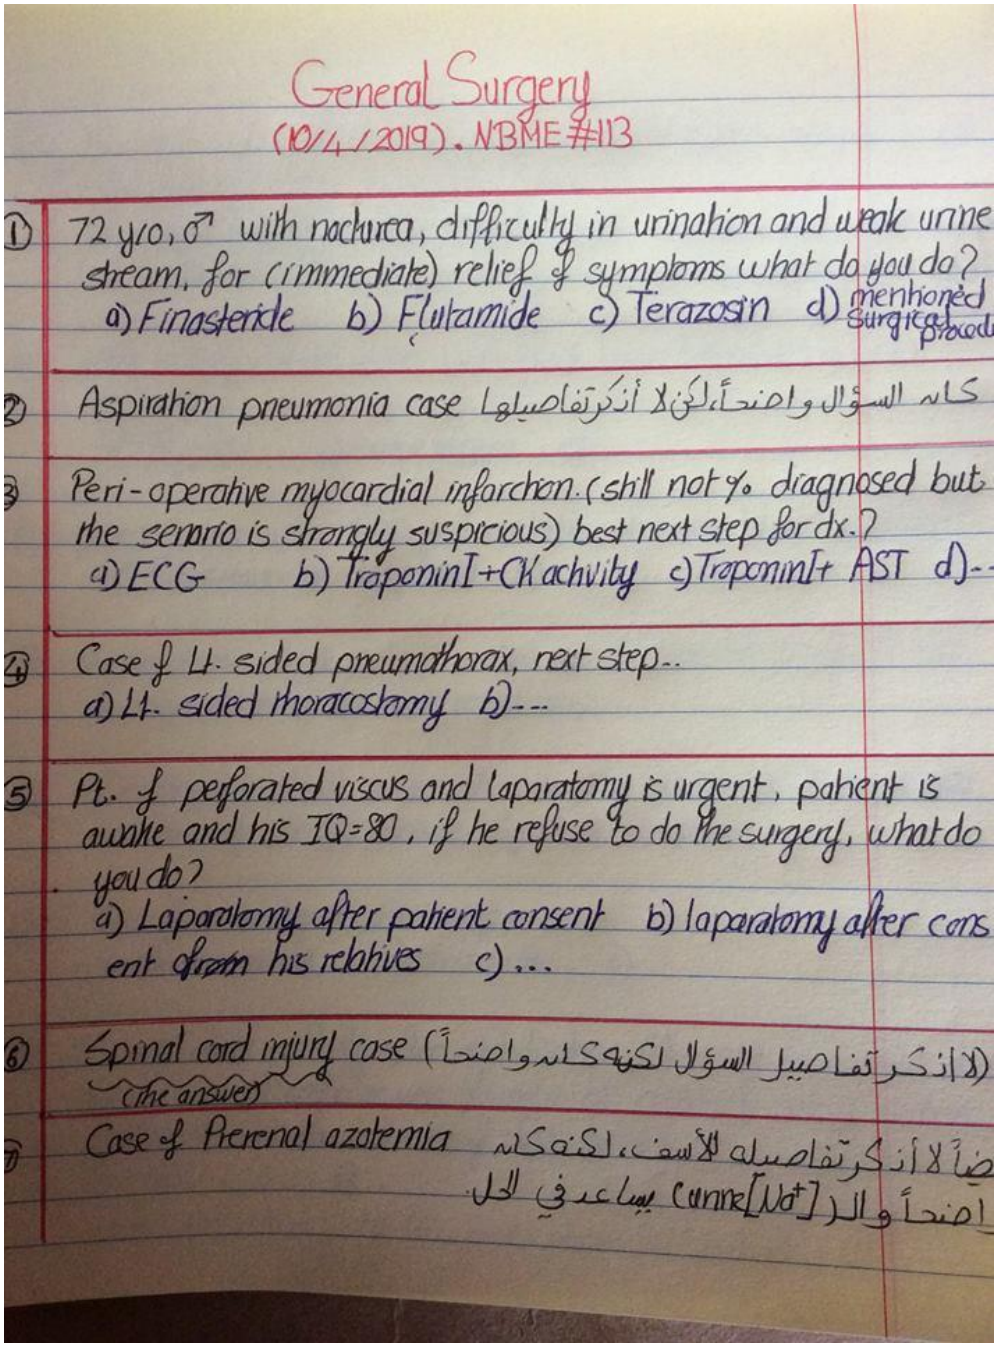

87- Case of Raynoid phenomena , what you advise patient ?
Avoid cold Exposure

NBME surgery 6th year 113 (كل الشكر ل د. إباء الصعيدي)

إباء صعيدي
٢١ أبريل

السلام عليكم و رحمة الله،،
نأسف على التأخير الذي قد أثّر سلباً على تذكّر تفاصيل الأسئلة، هذه أسئلتنا لمادة الجراحة NBME،،
**الأسئلة في الصور غير مرفقة بالإجابات الصحيحة
**كنصيحة بعد التجربة، كابلان و أسئلته أوّلاً و البقية تأتي..

1: alpha blocker (C)

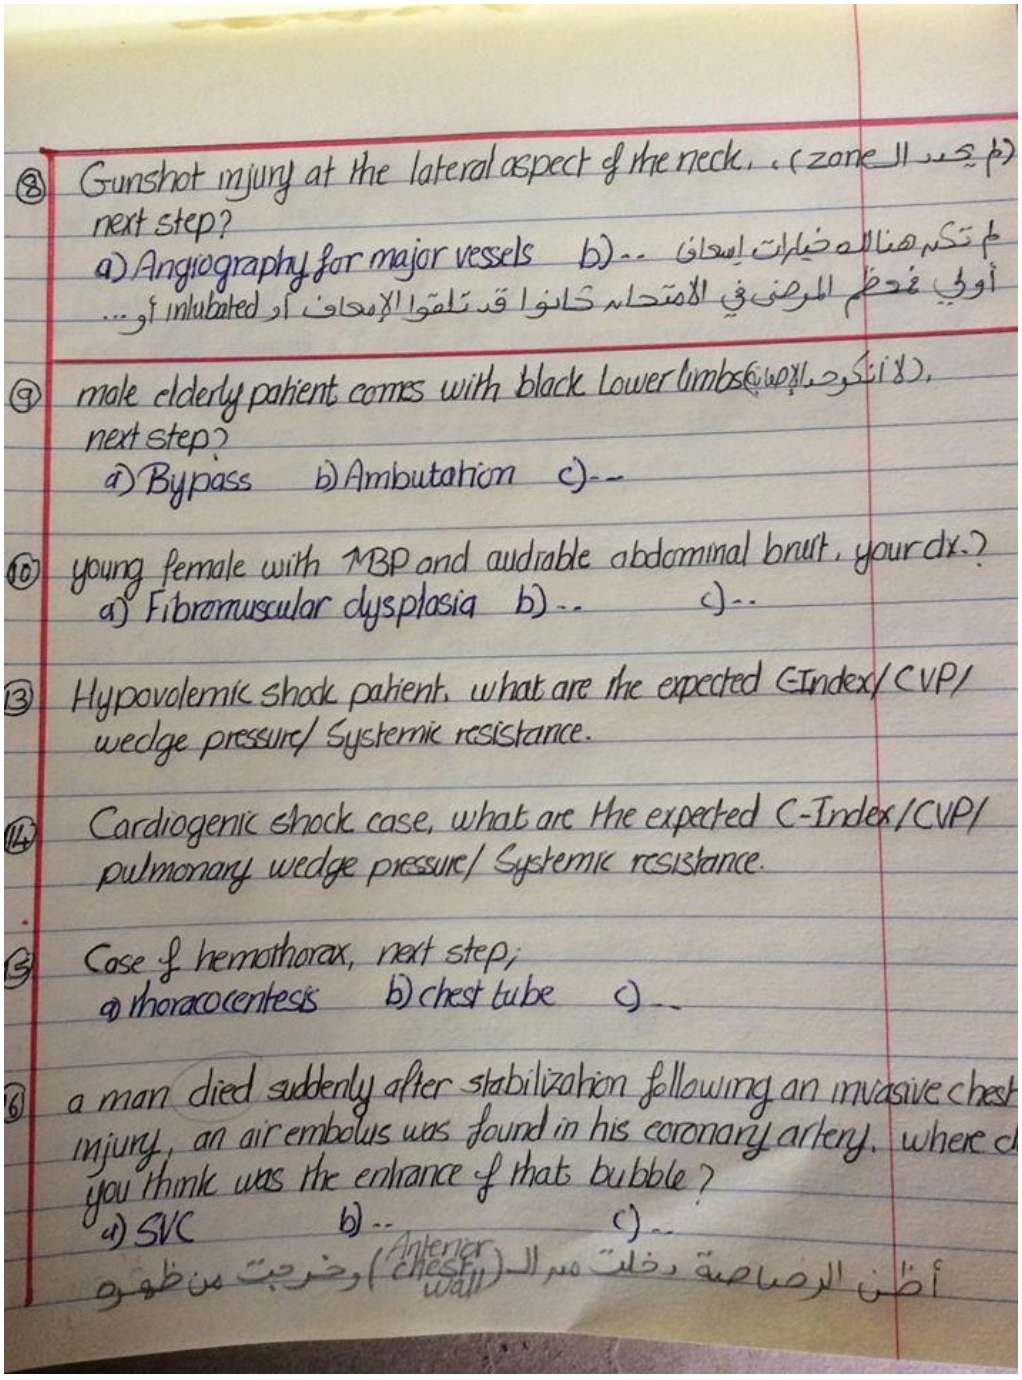

2: (أتوقع كانت مريضة عاملة عملية في الرقبة وبعدها صار شلل في الأحبال الصوتية، ف هاد الشي دليل خطر على احتمالية حصول aspiration)

3: B It's a MI case you need to confirm (more specific test)

4: A chest tube 5: A

6: Patient was hypotensive and HR was 70, this is inappropriate and should raise suspicion for spinal shock, Internal bleeding was with the choices but tachycardia is mandatory

7: BUN;cr > 20

8: (You should MEMORIZE neck zones and specific management for each one)

9: Six hours have passed with no intervention with black toe, no role of imaging or bypass > Amputation is the best next step

10: Fibromuscular dysplasia is the most common cause of secondary hypertension in young female, renal artery stenosis was with the choices but it is not the answer.

11:???? 12:???? (خطأ بالترقيم) 13:?

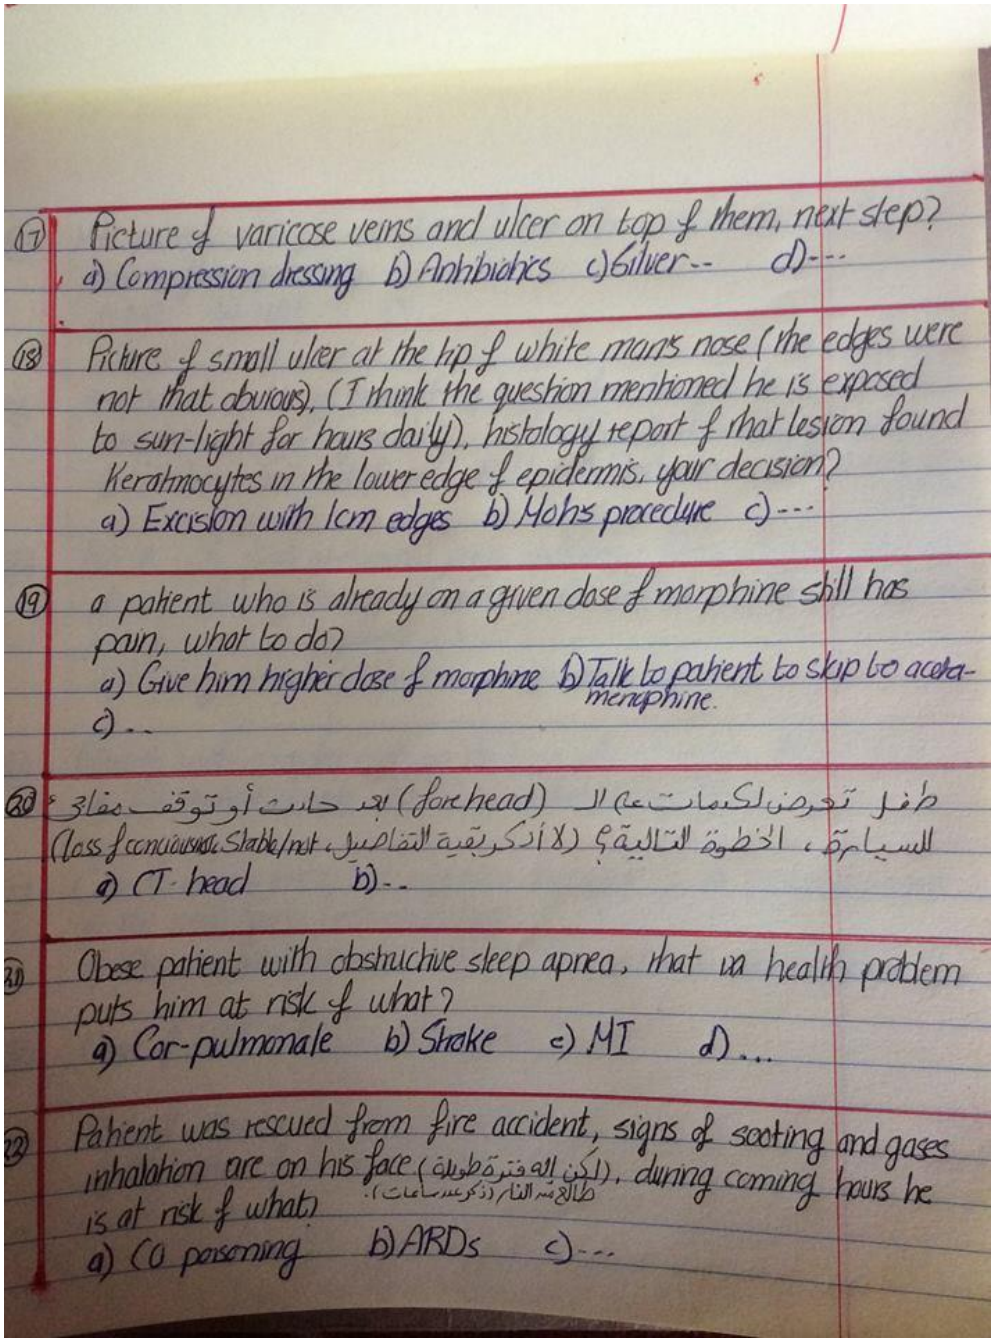

14: There is a table in the Uworld about types of shock and haw to differentiate between them . Very helpful and very important!

15:?

16: from a pulmonary vein

Why Are Penetrating Chest Trauma Patients at Increased Risk of Air Embolism? How Would It Present?

Air embolism can occur in both the venous and arterial systems. The main affected systems are the cardiovascular (e.g., chest pain, arrhythmia, and right-sided heart failure), respiratory (e.g., dyspnea, hypoxemia, and hypercarbia), and central nervous systems (e.g., confusion, altered mentation, and paradoxical cerebral embolism). Air emboli are potentially life-threatening. For example if the air were to enter the coronary arteries, blood flow to the heart may be interrupted. Concomitant injury to a bronchus and pulmonary vein may result in an air embolism. The underlying mechanism is believed to involve the traumatic creation of a fistula between an injured bronchus and pulmonary vein. Stab wounds or gunshot wounds near the hilum are the most common mechanism of such injuries as this is where these two structures lie in close proximity.

17: This was a little bit confusing since the surrounding reaction makes you think about possible infection, but this was the characteristic appearance of lipodermatosclerosis around venous ulcer. So A???

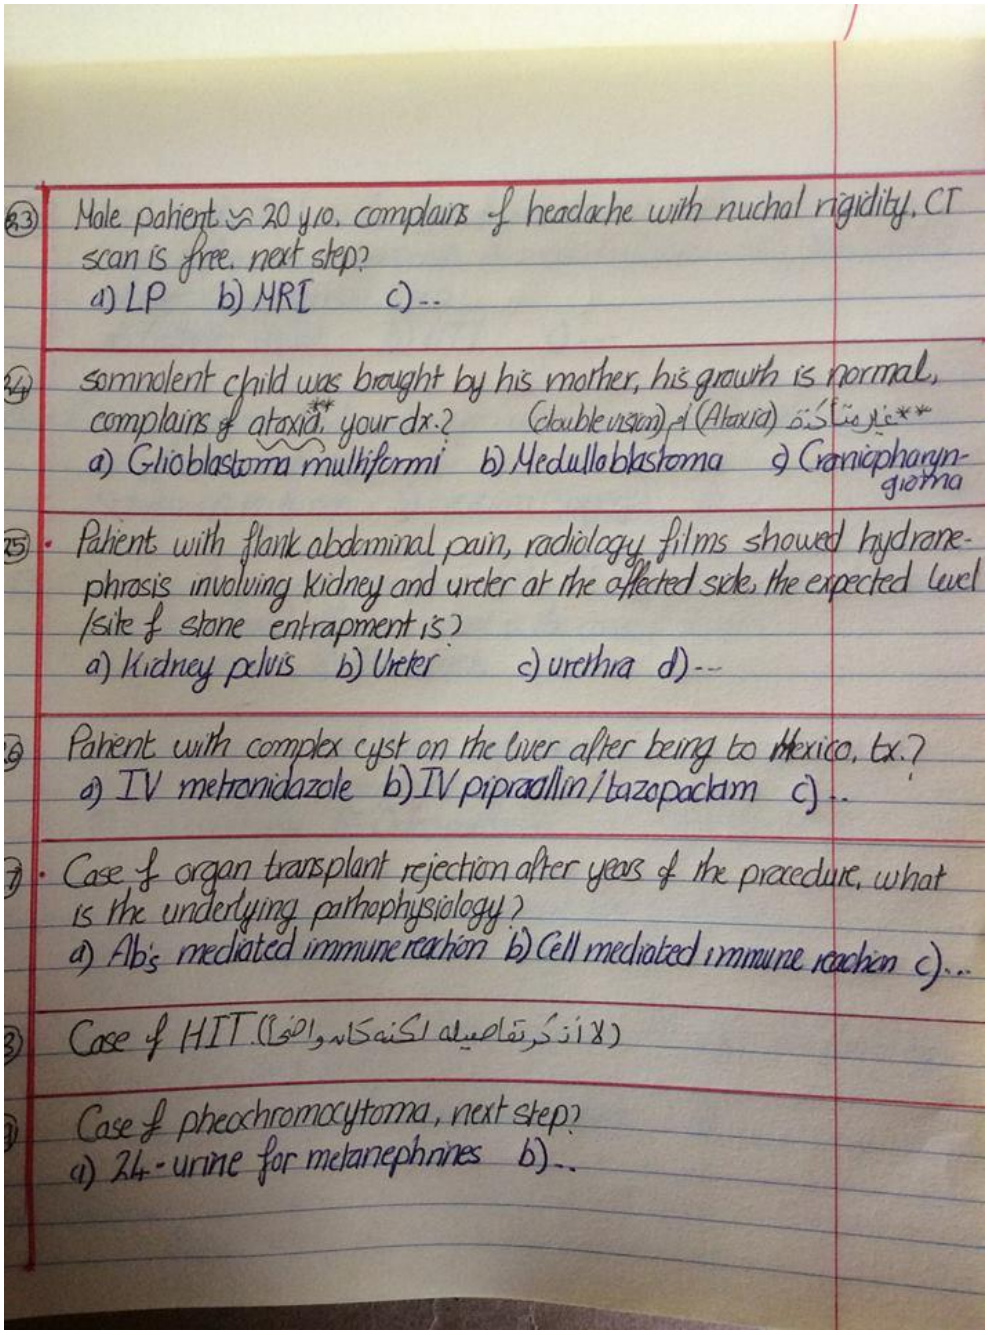

18: B? \yes shall be, as it is in the face, and this is mostly cancerous, which needs excision!

--- w it's in the face, that's the indication for Moh's surgery I think

19:? 20:?

21: A

22: after 36 hrs ARDS

23: A

24: B, childhood brain tumors are mostly infratentitorial, of the mentioned, medulloblastoma is the best answer

25: B

26: A, suspected amebic abscess

27: B : chronic graft rejection ,Cell mediated immunity (high yeild question)

	Transplant Rejection			
	Type	Onset	Mechanism & Vessel Histology	Type of Hypersensitivity
"Host vs. Graft"	**Hyperacute**	**Immediate**	**Preformed antibodies** directed against the donor tissue. Caused by accidental ABO **blood type incompatibility** which is very rare. Presents while still in surgery with **thrombosis and occlusion** of graft vessels	II
	Acute	**Weeks to months**	T-Cell mediated immune response directed against the foreign MHC. Inflammation and **leukocyte infiltration of graft vessels** results. Most common type.	IV
	Chronic	**Months to years**	T-Cell mediated process resulting from the foreign MHC "looking like" a self MHC carrying an antigen. Results in **intimal thickening and fibrosis of graft vessels** as well as graft atrophy	III & IV
Graft vs. Host		Varies	Donor T-Cells in the graft proliferate and attack the recipient's tissue. Most commonly seen in **bone marrow transplants**. Presents with **diarrhea, rash and jaundice**.	IV

* The most important thing to remember is the timeframe for the onset of symptoms as you can often determine what type of rejection it is based on time alone

© StompOnStep1.com

28:?

29: actually in this question , the patient states that he has a (history) of (episodic) palpitation with pounding sensation in the face and extreme diaphoresis ..but he complains of nothing during doctor visit , and the metanephrins in blood they are only elevated during the attack ,but these hormones will be normal after resolving of the attack , so that , u have to order 24-hr urine for metanephrines instead of serum metanephrins

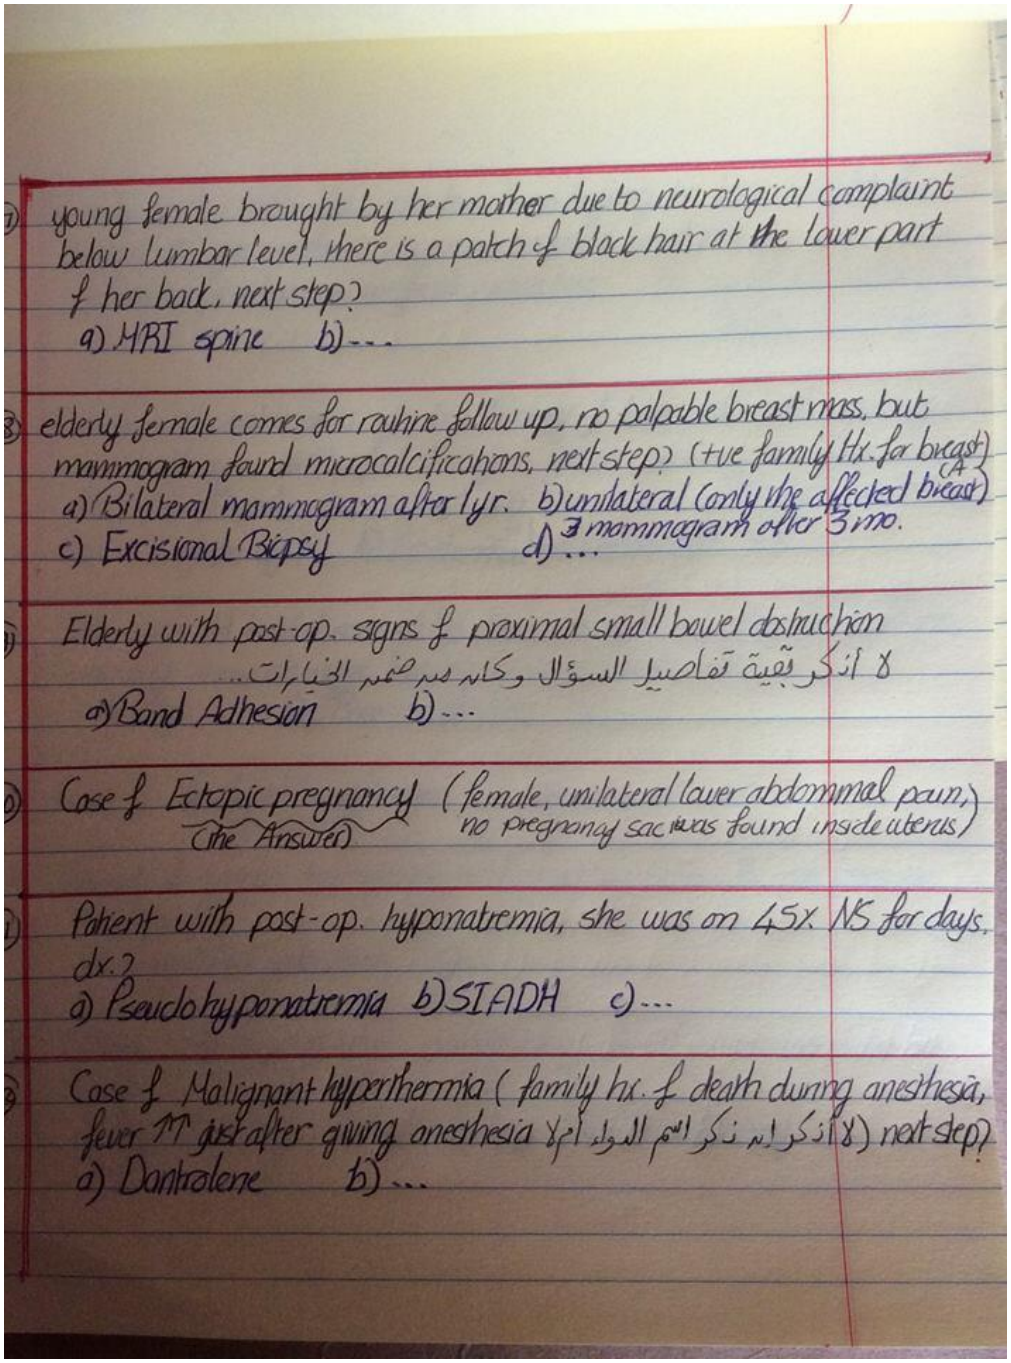

30: Catheter sepsis should be ruled out in febrile patient on central line EVEN if there is no redness or tenderness at insertion site

31: mild dysplasia : follow up after 6 month

32: Atelectasis, even with minimal pleural effusion 33: B

34: There was a choice "Bupivacaine" local\ Because the main concern in the Q is the incisional pain , and Bupivacaine is long acting local anesthetic 35:?

36: 47 yo female patient with neck of femur fracture ,last menstrual cycle before two years, on chronic levothyroxine due to hypothyroidism, normal labs

37: To R/O spina bifida occulta

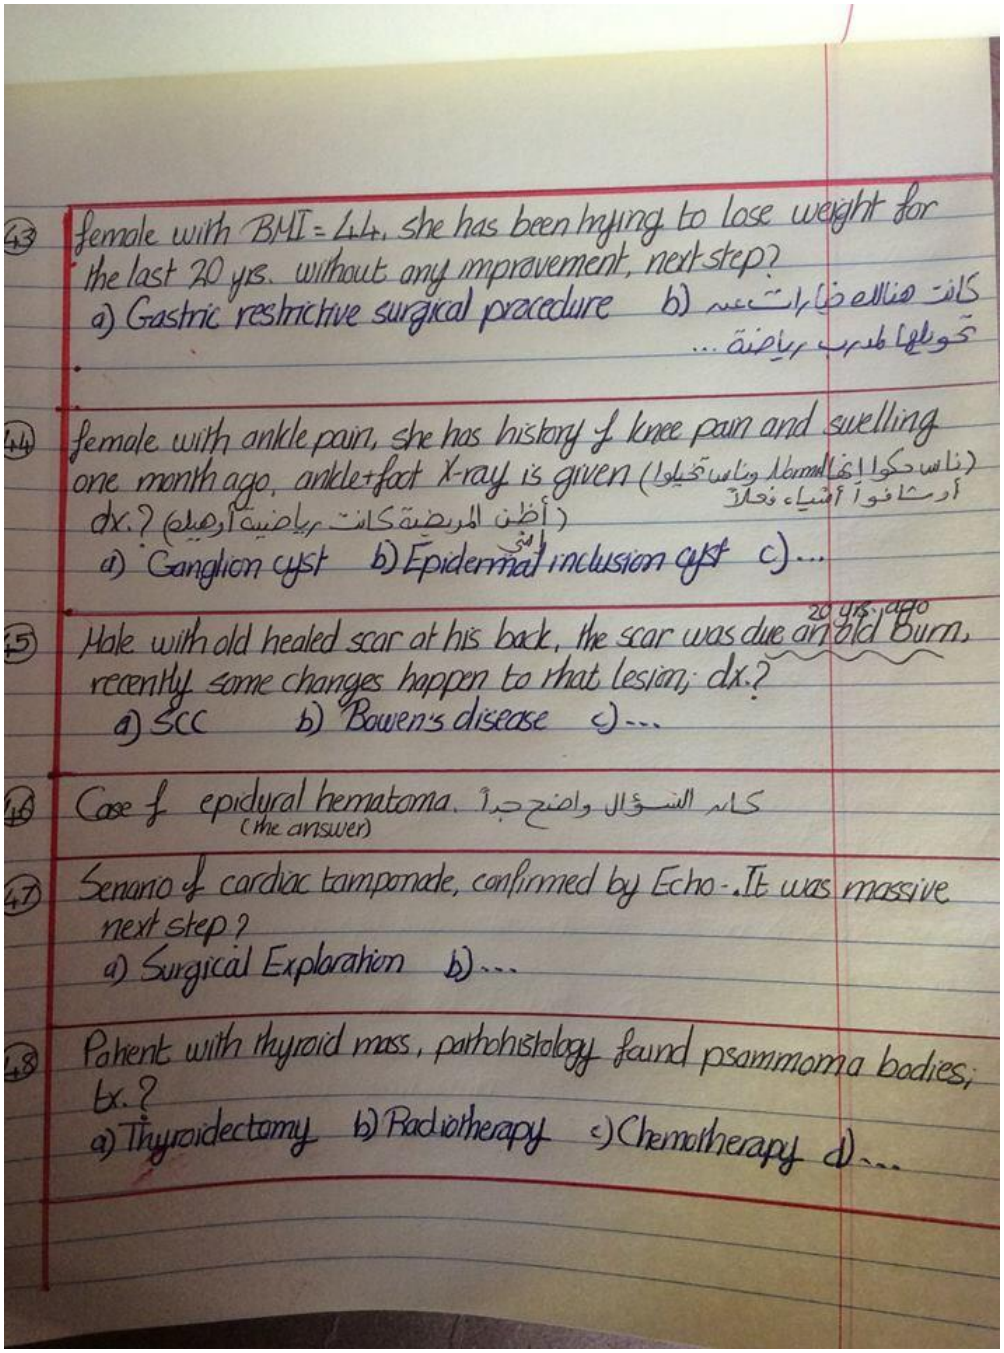

38: excisional biopsy

39:?

40:?

41: There was two cases about SIADH, this case And the second , was post head trauma

42: ?

43: A, review indications of surgical intervention in obesity

44: A : ganglion cyst / distal tibia. On x-ray ; there was soft tissue swelling

Almost as this pic:

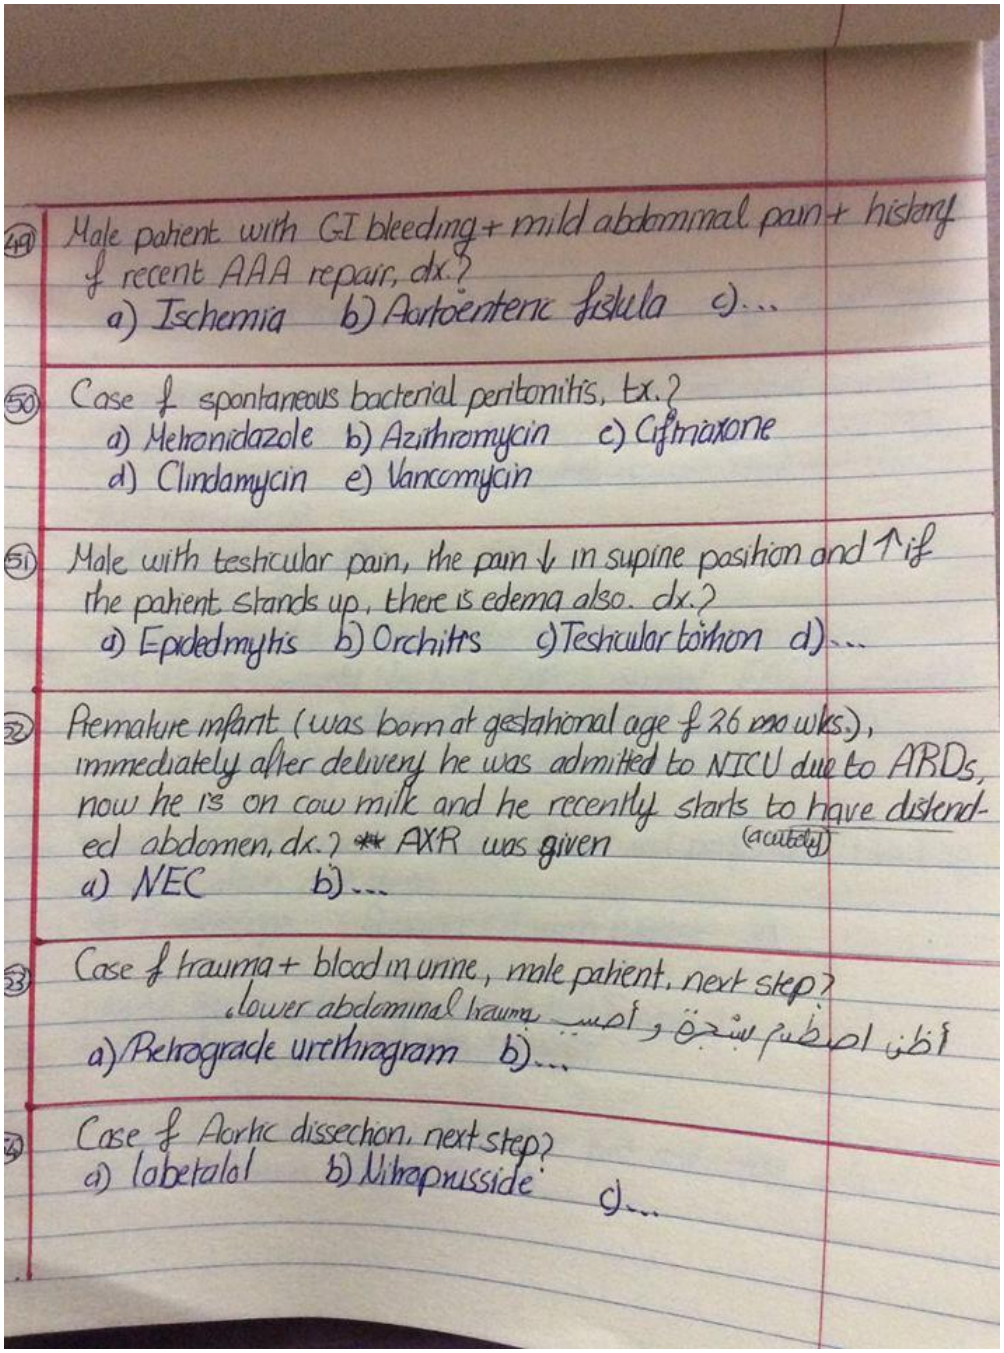

)اه الڤيوو كانت مختلفة شوي PA. وال swelling مش كثير بارز وفي الهيستوري كان ذاكر انها بتزيد لما يلعب رياضة(

45: A

46:?

47:?

48: A

49: ischemic colitis after AAA repair

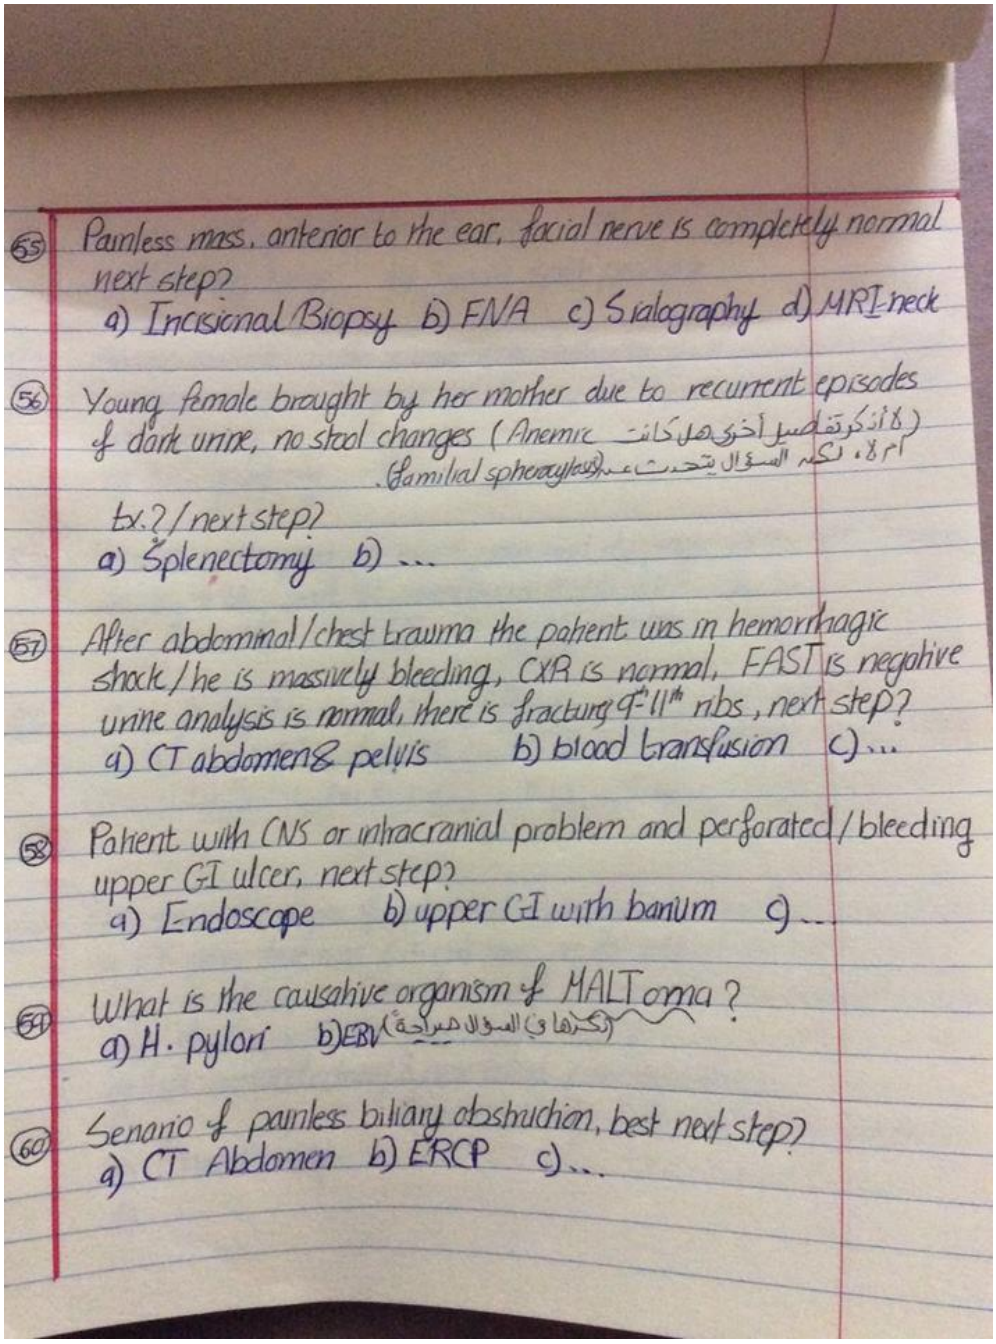

50: Ceftriaxone , but I think the choice in the exam was Ceftazidime .

51: testicular torsion

52:?

53:?

54: Labetalol

55: FNA for parotid mass

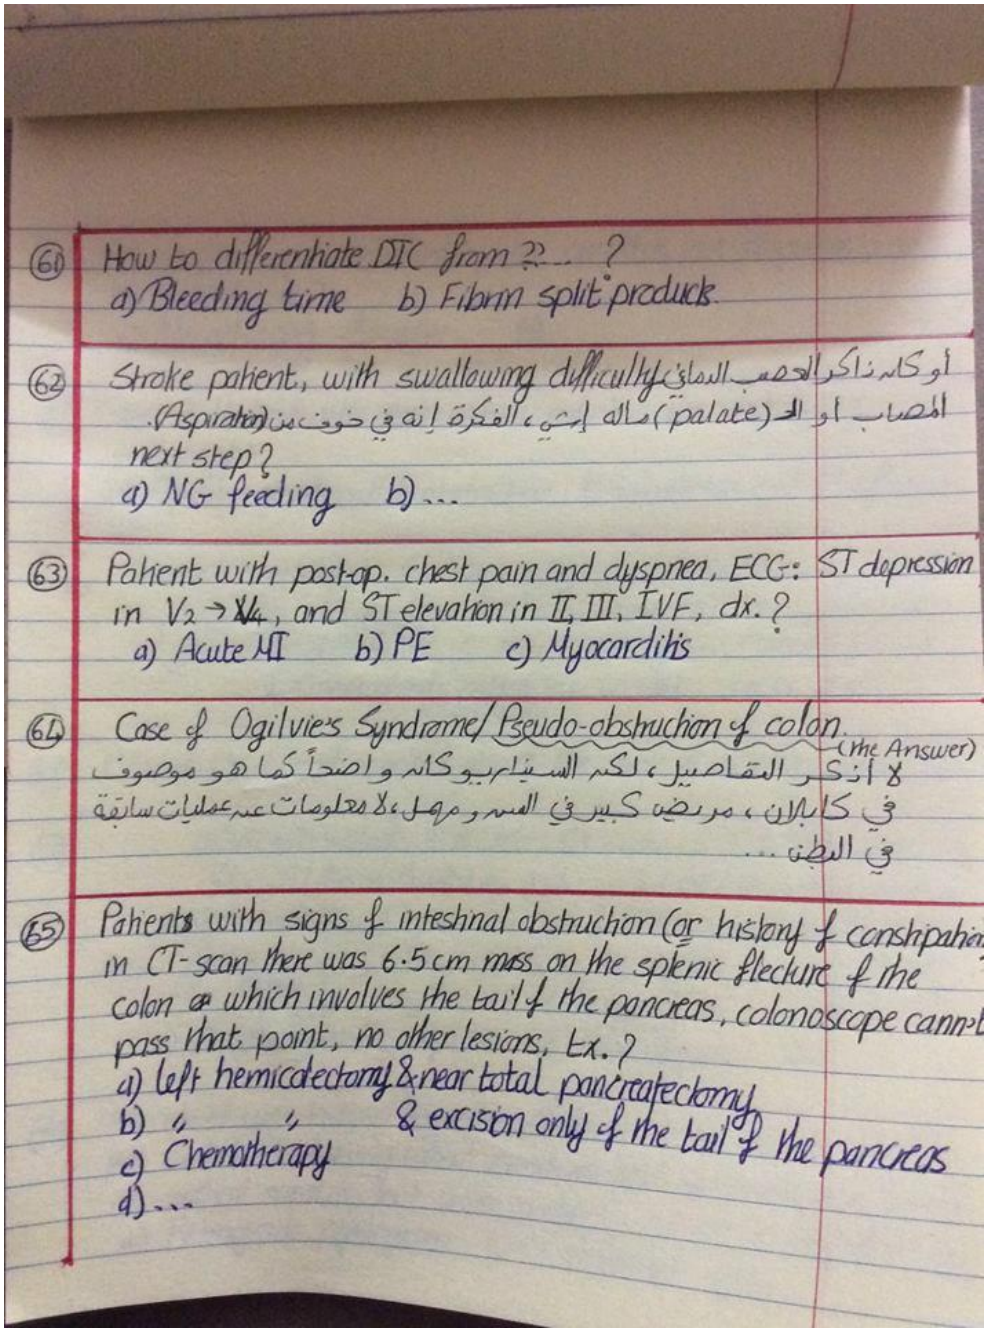

56: typical hx of spherocytosis SO SPLENECTOMY

57: Ct for abdomen and pelvis\ injury to the internal organs , mainly spleen by the fractured ribs ------

58:?

59:?

60: I think the case is obstructive jaundice due to pancreatic ca according to the case . So best next step CT abdomen.

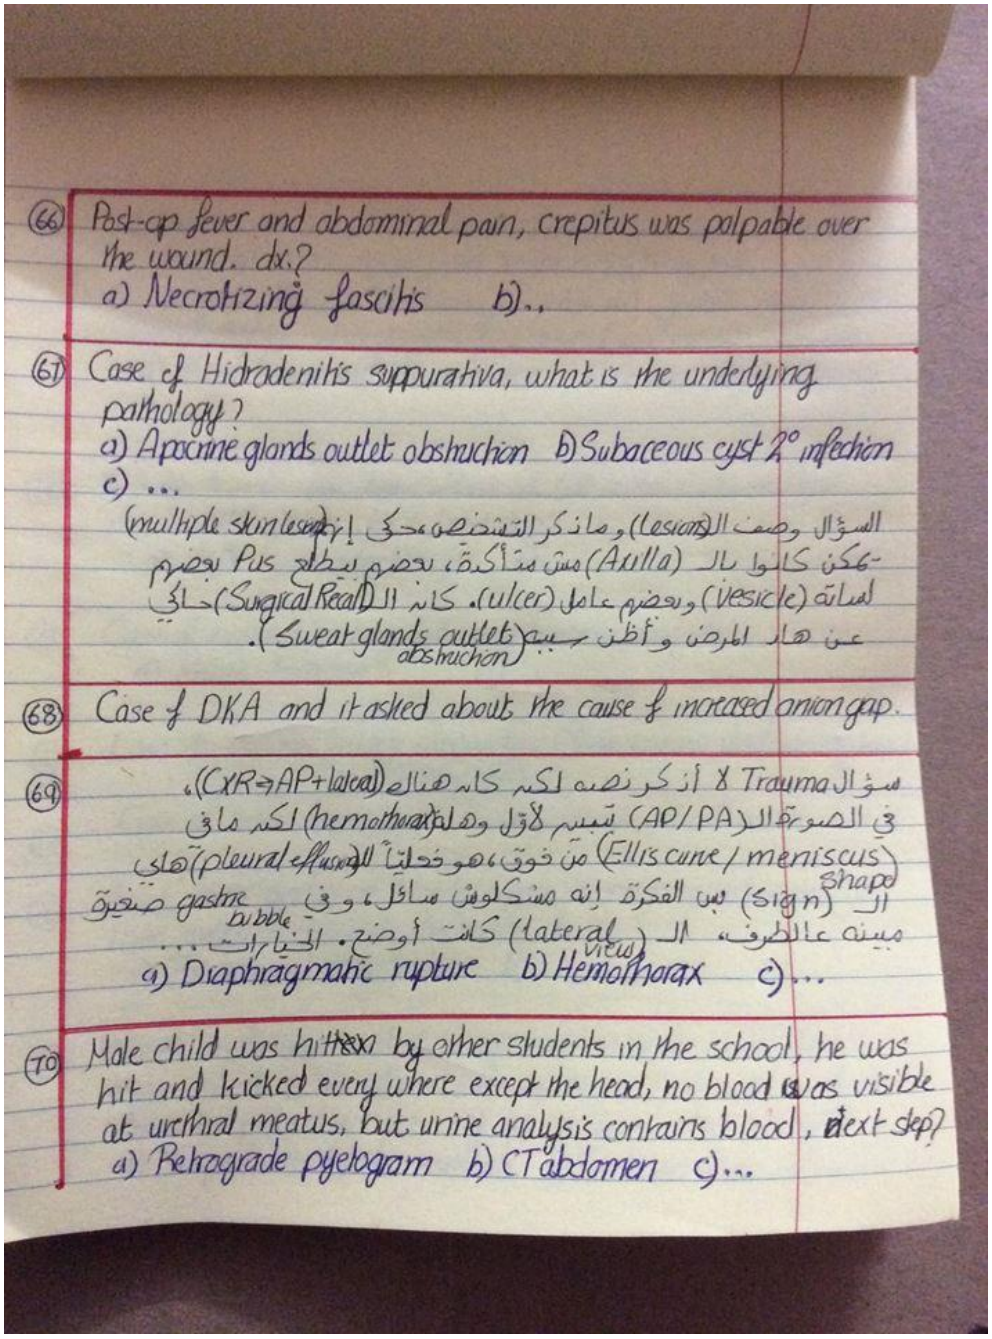

61: B

62: some answered “NG tube” and others “Jejunostomy”

63: A

64:?

65: i think the answer is chemotherapy due to its large size .

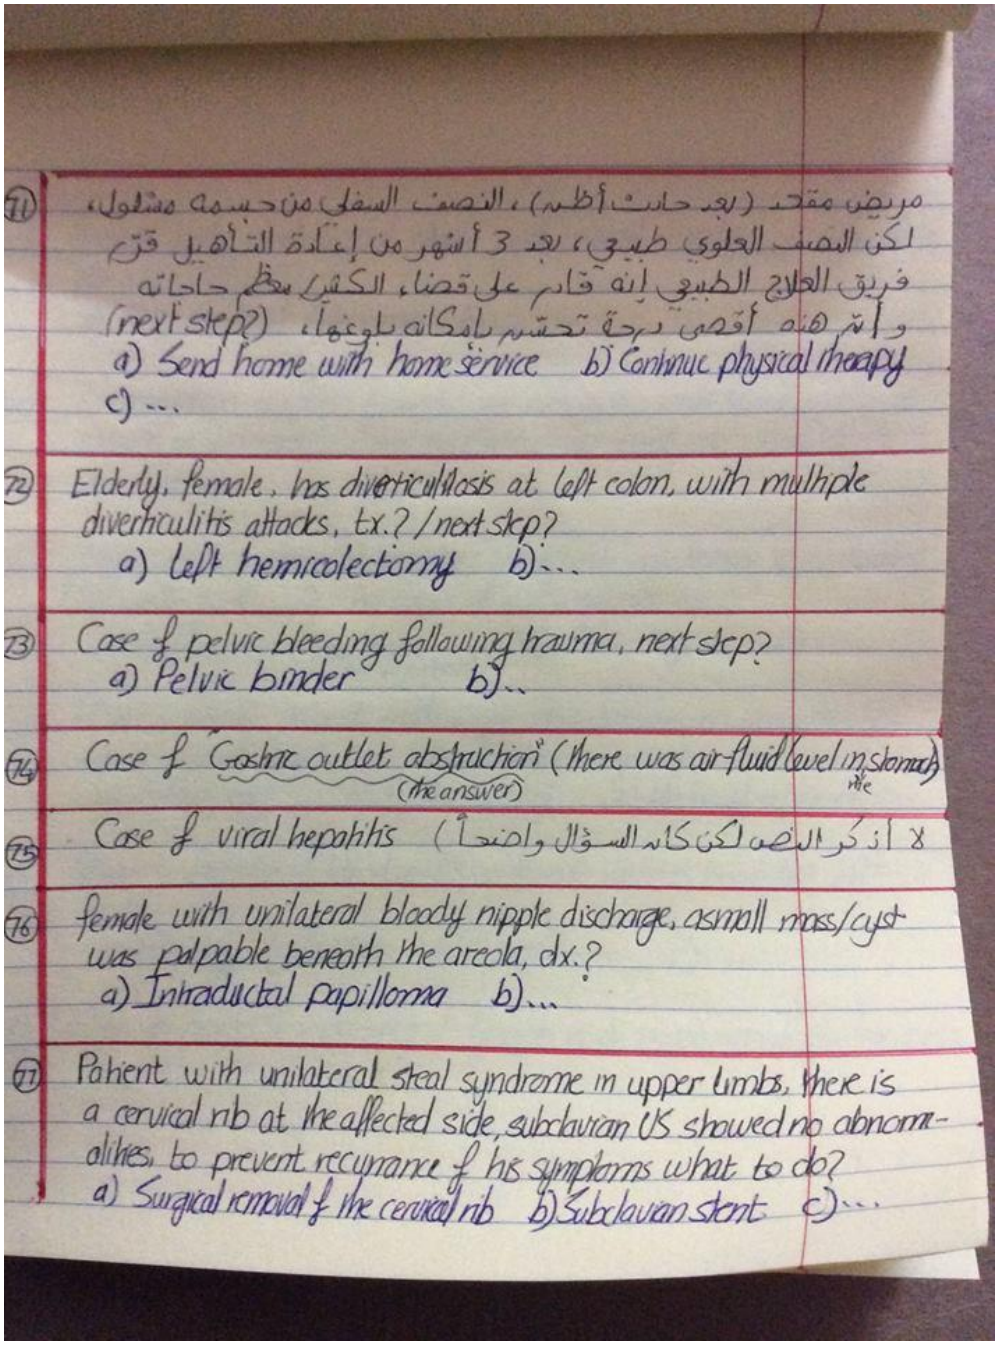

66:?

67: A apocrine gland outlet obstruction\ I think there was a similar Q in CMS

68:?

69:?

70: CT scan, the pt was with multiple traumas to abdomen / pelvis

71:?

72:?

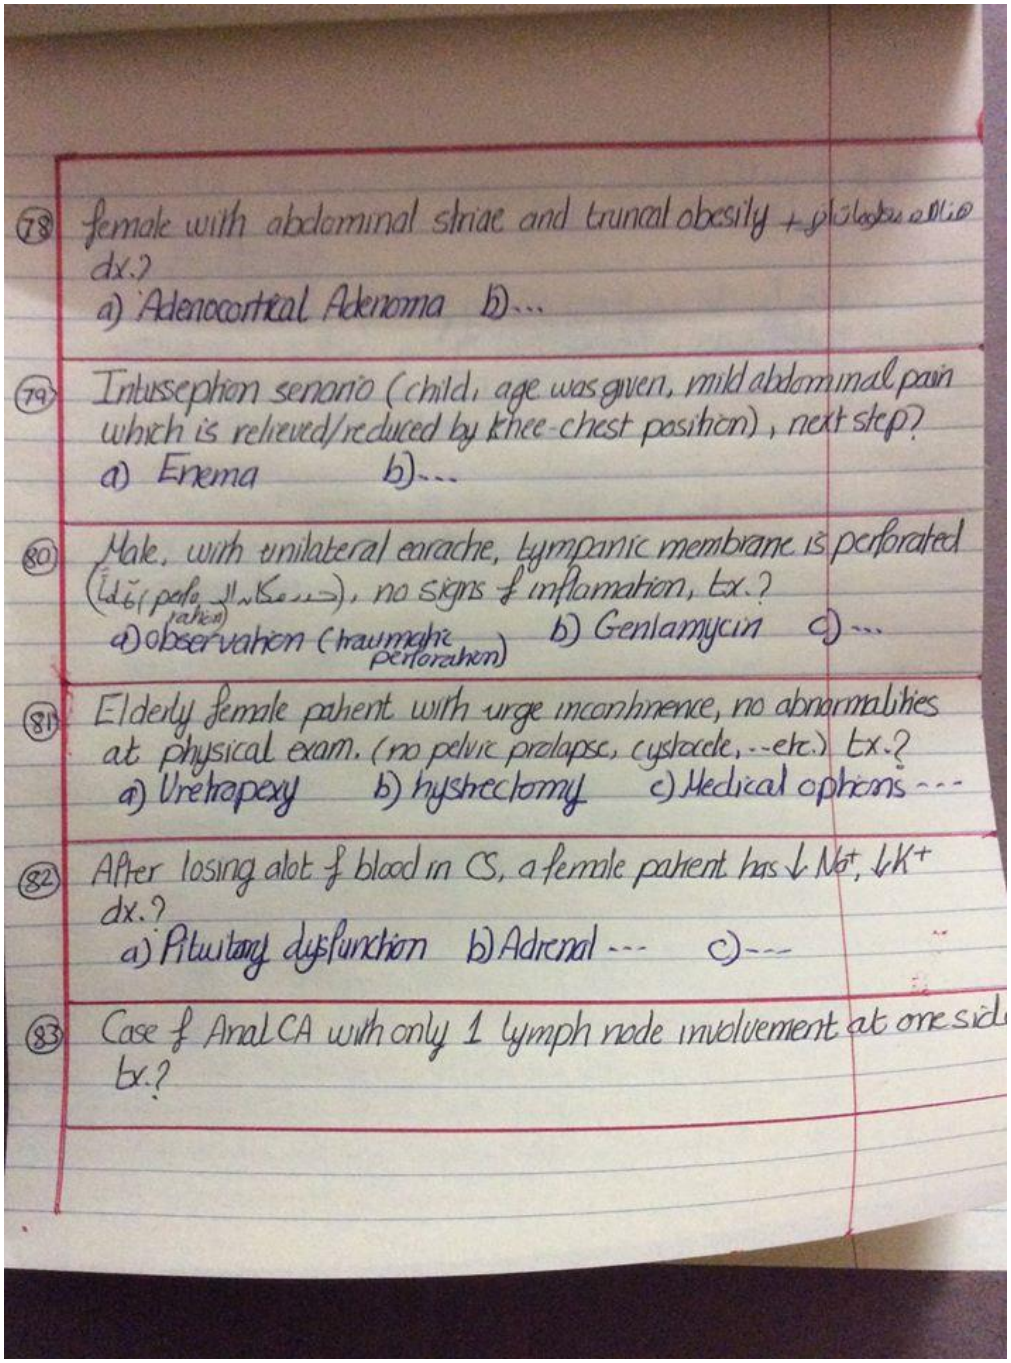

73:?

74:?

75:?

76:?

77: surgical removal of the cervical rib

78:?

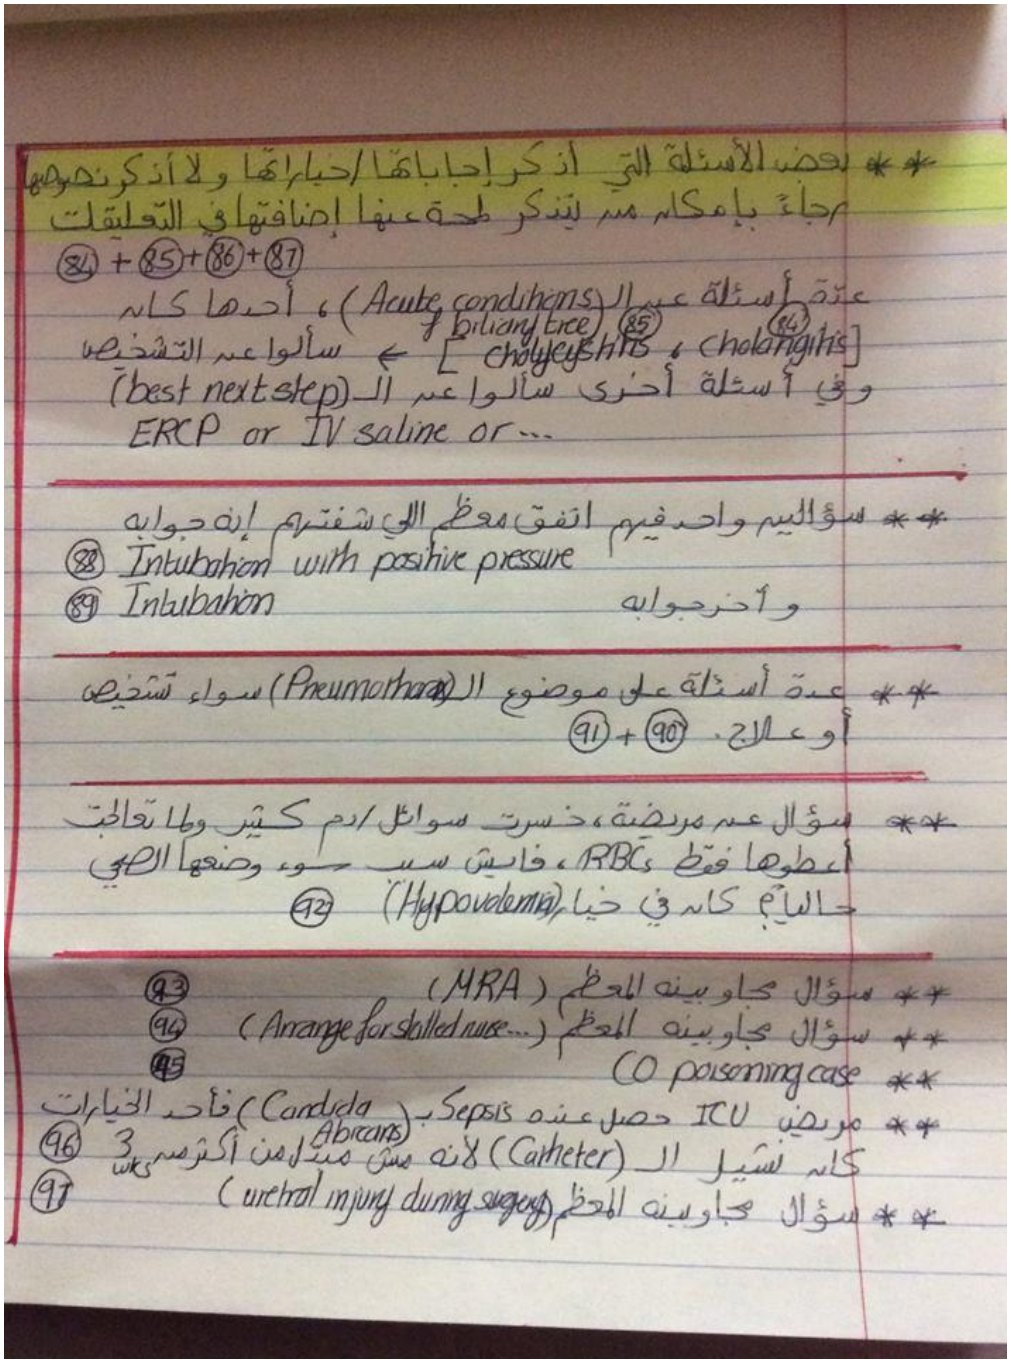

79:?

80: the perforation was less than 10% of the tympanic membrane . And no any sign of inflammation. So just observation and keep it dry! There was a choice to do irrigation (X)

81: typical case of stress incontinence → Urethropexy

82: case of sheehan syndrome " pituitary dysfunction "

83:?

88: i think it was a case of ARDS post trauma

Tariq Hattab **Human Medicine 114**
April 22 ·

السلام عليكم
بتمنى تكون تجربة اليوم منيحة
بنا نعمل نفس الباطني انو نكتب تحت كل عنوان شو الاسئلة اللي بنتذكرها
و عشان في ناس بتتوتر، ما بنا نكتب الجواب، بس السؤال و الخيارات
و احنا بنجاوب او بندور عالجواب بس نجمعهن ان شاء الله
و بالتوفيق باللي جاي..هانت، مش مطولة
